Writing for the Sciences Inquiry Questions

My inquiry questions are ranked as the best to the worst from top to bottom below:

1. Research question : How do consumption habits lead to obesity in children of ages between 2 and 19?

I think this is the best among the three because it specifies the type of habits and the age range for children.

2. Research question : What habits cause obesity in children?

The types of habits can be too broad to study for research and there is no specification as to what factor we will be looking at.

3. Research question : Does eating late cause obesity in children?

This is a yes or no question and might have direct answers from prior research done. So this should be the worst among my 3 choices.
